DigitalSecurityCamera:1 Device Template Version 1.01
For UPnP™ Version 1.0
Status: Standardized DCP
Date: March 24, 2005

This Standardized DCP has been adopted as a Standardized DCP by the Steering Committee of the UPnP™ Forum, pursuant to Section 2.1(c)(ii) of the UPnP™ Forum Membership Agreement. UPnP™ Forum Members have rights and licenses defined by Section 3 of the UPnP™ Forum Membership Agreement to use and reproduce the Standardized DCP in UPnP™ Compliant Devices. All such use is subject to all of the provisions of the UPnP™ Forum Membership Agreement.

THE UPNP™ FORUM TAKES NO POSITION AS TO WHETHER ANY INTELLECTUAL PROPERTY RIGHTS EXIST IN THE STANDARDIZED DCPS. THE STANDARDIZED DCPS ARE PROVIDED "AS IS" AND "WITH ALL FAULTS". THE UPNP™ FORUM MAKES NO WARRANTIES, EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE STANDARDIZED DCPS, INCLUDING BUT NOT LIMITED TO ALL IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT AND FITNESS FOR A PARTICULAR PURPOSE, OF REASONABLE CARE OR WORKMANLIKE EFFORT, OR RESULTS OR OF LACK OF NEGLIGENCE.

List of Tables

Table 1: Device Requirements ..................................................................................................................4
1. Overview and Scope
This device template is compliant with the Universal Plug and Play Architecture, Version 1.0.

DigitalSecurityCamera:1.0 provides the following functionality:

- Providing control of basic settings of the actual image generating part.
- Enabling access to live snapshot still images.
- Enabling access to live motion images (video).
- Implements a “stateless” behavior. The action of fetching a VideoURL or VideoPresentationURL does not affect the properties of previous, simultaneous or later fetched video streams and VideoPresentation URLs. This allows for multiple User Control Points to receive images with different properties without potential interference.

This device template does not address:

- Analog camera functions
- Pan Tilt Zoom devices

2. Device Definitions

2.1. Device Type

The following device type identifies a device that is compliant with this template:

\[ \text{urn:schemas-upnp-org:device:DigitalSecurityCamera:1} \]

2.2. Device Model

Products that expose devices of the type \text{urn:schemas-upnp-org:device:DigitalSecurityCamera:1} must implement minimum version numbers of all required embedded devices and services specified in the table below.

Table 1: Device Requirements

</table>

\^{}1 R = Required, O = Optional, X = Non-standard.
\^{}2 Prefixed by \text{urn:upnp-org:serviceId}.
\^{}3 At least one of DigitalSecurityCameraStillImage or DigitalSecurityCameraMotionImage shall be implemented.

2.3. Theory of Operation

A Digital Security Camera Device contains services for fetching images and controlling of basic settings of the actual image generating part.

Settings are global to the device and will affect images generated by the device regardless of retrieval method. For instance if a device is equipped with an instance of the Digital Security Camera Motion Image service and an instance of the Digital Security Camera Still Image service, images “retrieved” using either of these services will be affected by changes described in the Digital Security Camera Settings service.

© 2005 Contributing Members of the UPnP™ Forum. All Rights Reserved.
It is required for a Digital Security Camera Device to support access to live snapshot still images. Supporting of live motion images (video) is optional for the device.

The operation of fetching images is “stateless”. The action of fetching an ImageURL or VideoURL does not affect the properties of previous, simultaneous or later fetched Image or Video URLs. This allows for multiple User Control Points to receive images with different properties without potential interference.
3. XML Device Description

4. Test

Syntactical testing is performed by the UPnP test tool based on the XML description as provided in Section 3.

The working committee and the implementers have come to the conclusion that further test descriptions e.g. for semantical testing do not provide a higher level of interoperability.

Thus the XML description is deemed to be sufficient for testing of devices that implement this template and further test descriptions are not provided by this template.
