This Standardized DCP has been adopted as a Standardized DCP by the Steering Committee of the UPnP Forum, pursuant to Section 2.1(c)(ii) of the UPnP Membership Agreement. UPnP Forum Members have rights and licenses defined by Section 3 of the UPnP Membership Agreement to use and reproduce the Standardized DCP in UPnP Compliant Devices. All such use is subject to all of the provisions of the UPnP Membership Agreement.

THE UPnP FORUM TAKES NO POSITION AS TO WHETHER ANY INTELLECTUAL PROPERTY RIGHTS EXIST IN THE STANDARDIZED DCPS. THE STANDARDIZED DCPS ARE PROVIDED "AS IS" AND "WITH ALL FAULTS". THE UPnP FORUM MAKES NO WARRANTIES, EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE STANDARDIZED DCPS INCLUDING BUT NOT LIMITED TO ALL IMPLIED WARRANTIES OF MERCHANTABILITY, NONINFRINGEMENT AND FITNESS FOR A PARTICULAR PURPOSE, OF REASONABLE CARE OR WORKMANLIKE EFFORT, OR RESULTS OR OF LACK OF NEGLIGENCE.

1. Overview and Scope

This device template is compliant with the Universal Plug and Play Architecture, Version 1.0.

HVAC_System:1 provides the following functionality:

- 1 to n ZoneThermostats are part of this device. If ZoneThermostats are added (or removed) a new device description is established and advertised.
- The ability to set or get system level operating and fan modes. This information can be different from similar information found in the ZoneThermostats
- Optionally an outdoor temperature sensor service

2. Device Definitions

2.1. Device Type

The following device type identifies a device that is compliant with this template:

\[
\text{urn:schemas-upnp-org:device:HVAC_System:1}
\]

2.2. Device Model

Products that expose devices of the type \text{urn:schemas-upnp-org:device:HVAC_System:1} must implement minimum version numbers of all required embedded devices and services specified in the table below.

¹ R = Required, O = Optional, X = Non-standard.
² Prefixed by \text{urn:upnp-org:serviceId:}.

2.2.1. Description of Device Requirements

Any number of HVAC_ZoneThermostats may be included in the system device. Each time a ZoneThermostat is added the System device must go bye-bye and then re-advertise its existence via normal UPnP protocols.

HVAC_UserOperatingMode, HVAC_FanOperatingMode, FanSpeed, and HVAC_SetpointSchedule services are used in both the System device and the ZoneThermostat device. Their use is differentiated by use of the Service ID. In the System device these services indicate the system level operating modes.
2.2.2. Relationships Between Services

N/a

2.3. Theory of Operation

A HVAC system includes all the heating and cooling equipment necessary to independently condition a whole house or a region of a house. Large homes may include several independent systems. Small homes may only have one system. Individual systems may be zoned.

A forced air system may typically include a furnace with heat exchangers and a fan or a blower, an air conditioning compressor unit, filters, duct work, temperature sensors, temperature setpoints, mode controls and in zoned systems electrically controllable valve or dampers.

Hydronic systems are usually zoned and may typically include a boiler, cooler, pumps, valves, radiators, temperature sensors, temperature setpoints and mode controls.

HVAC_System is a container for all the elements of a system. It is not necessarily a recognizable single physical device. All the elements are not necessarily exposed. This DCP is targeted at user control and does not expose operational details.

HVAC system may include independent controls for sub-regions or zones. This is called a Zoned HVAC System.

HVAC_System is the root device and includes system level services and one or more HVAC_ZoneThermostat Devices. The Thermostats provide the zone level controls. Binding of the Thermostats to the System is implied by the hierarchical design of the System device.

4. Test

Testing of the UPnP functions Addressing, Discovery, Description, Control (Syntax) and Eventing are performed by the UPnP Test Tool v1.1 based on the following documents:

- UPnP Device Architecture v1.0
- The Device Definitions in chapter 2 of this document
- The XML Device Description in chapter 3 of this document
- The UPnP Test Tool device template test file: HVAC_System1.xml
- The template documents for the services referenced by this device, together with their respective UPnP Test Tool service template test files.
